TC-K808ES

SERVICE MANUAL

AEP Model

Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation. "DOLBY" and the double-D symbol [17] are trademarks of Dolby Laboratories Licensing Corporation.

Model Name Using Similar Mechanism	TC-K222ESA/ TC-K890ES
Base Unit Name	TCM-200D14

SPECIFICATIONS

Recording system Fast winding time

4-track 2-channel stereo Approx. 90 sec. (with Sony C-60 cassette)

AC bias

Bias Heads

Erasing head × 1 (S&F head)

Recording head × 1 (SD head)

Motors

Playback head × 1 (SD head) Capstan motor × 1 (direct drive linear torque

BSL motor)

Reel motor × 1 (DC motor) Assist (mechanism drive) motor × 1 (DC

motor)

Signal-to-noise ratio (at peak level and weighted)

Cassette	Type IV	Type II	Type I
(Dolby NR off)	61 dB	59 dB	57 dB

S/N ratio improvement (approximate values) With Dolby B NR on: 5 dB at 1 kHz; 10 dB at 5 kHz With Dolby C NR on: 15 dB at 500 Hz; 20 dB at 1 kHz With Dolby S NR on: 10 dB at 100 Hz; 24 dB at 1 kHz

Harmonic distortion

0.4% (with Type I, 160 nWb/m, 315 Hz,

3rd H.D.)

1.5% (with Type IV, 250 nWb/m, 315 Hz, 3rd H.D.)

Frequency response (Dolby NR off)

Type IV cassette	20 - 21,000 Hz (±3 dB, IEC) 20 - 16,000 Hz [±3 dB (-4 dB recording)]
Type II cassette	20 - 19,000 Hz (±3 dB, IEC)
Type I cassette	20 - 17,000 Hz (±3 dB, IEC)

Type IV: Sony METAL-S or ES-IV Type II : Sony UX-S or UX

Type I : Sony HF-S

Wow and flutter

± 0.05% W.Peak (IEC) 0.025% W.RMS (NAB) ± 0.07% W.Peak (DIN)

Line inputs	Sensitivity	0.16V	
(phono jacks)	Input impedance	47 k ohms	

Outputs

Line outputs (phono jacks)	Rated output level	0.5 V at a load impedance of 47 k ohms
	Load impedance	Over 10 k ohms
Headphones (stereo phone jack)	Output level	0 - 3 mW at a load impedance of 32 ohms

General

Power requirements Power consumption Dimensions

220 - 230 V AC, 50/60 Hz

26 W

Approx. $470 \times 135 \times 350 \text{ mm (w/h/d)}$ including projecting parts and controls Approx. 8.0 kg (17 lbs 11 oz)

Supplied accessories Audio connecting cords (2)

M3x8 screws (4)

 - REC (recording) button and indicator

SECTION 2 DISASSEMBLY

NOTE: Follow the disassembly procedure in the numerical order given.

COMPARATOR BOARD/CAPSTAN BOARD/FLYWHEEL/FG BOARD

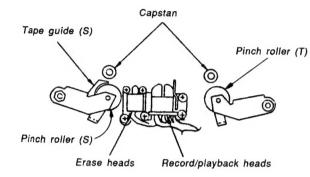

SECTION 3 MECHANICAL ADJUSTMENTS

Refer to page 8 for Adjustment Location.

PRECAUTIONS

1. Clean the following parts with an alcohol-moistened swab. (tape sliding surface)

- 2. Demagnetize the record/playback heads, erase heads and the capstan using the head demagnetizer.
- 3. Do not use a magnetized screw driver for the adjustments.
- 4. After the adjustments, apply suitable locking compound to the parts adjusted.
- 5. The adjustment should be performed with the rated power supply voltage unless otherwise noted.

Tape Passing Adjustment

Note: For the following adjustments, use the jig as far as possible. Although the following methods are operable without using the jig, precise adjustment may not be completed, for example no compatibility to other decks is available even if self recording and playback is OK.

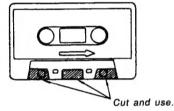

In these adjustments, either the pinch roller guide in the S side or the record/playback head guide is referred to for tape pass. Therefore, do not unnecessarily rotate the adjustment screws including those of the erase heads unless any one is replaced. When 2 or more heads or pinch rollers out of these 2 heads and pinch rollers are to be adjusted or replaced, use the jig for the adjustments or replace one at first and then take complete tape pass and then replace the second one.

Head height adjusting jig: apex

Preparation:

 Mirror cassette CQ009C 8-909-708-01 (Or CQ012C 8-909-708-02)

If it is not avaliable, cut a part of the half of a 120 minute cassette tape and use.

Plus screw driver

Medium size Apply to the head adjusting screw.

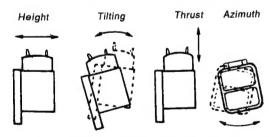

Minus screw driver

Large size Apply to the pinch roller adjusting screw in the S side.

- · Pen light
- WS-48B (3kHz, 0dB)
- P-4-A100 (10kHz, -10dB)

Definition:

The following view relates to record/playback heads.

For the locations of the adjusting screws, see the view "adjustment location" in the lower right corner of Page 8.

Procedure:

Pinch roller in the S side

Note: It should be adjusted only when the pinch roller in the S side is replaced.

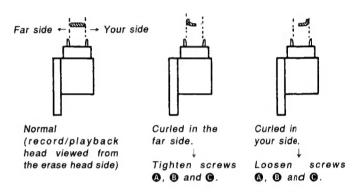

- 1. Mount the mirror cassette and set the equipment to playback state.
- Check that the tape is curled in the pinch roller guide or the guide of the record/playbakd heads.

If curled, remedy it by rotating the tape curl adjusting screw **(1)**. At tha time, check that the tape runs near the center part of the erase heads.

Record/playback heads

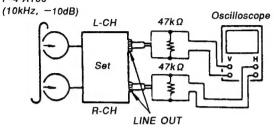

Note: The heads should be adjusted only when the record/playback head is replaced.

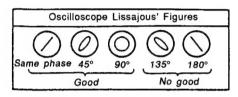

- 1. Mount the mirror cassette and set the equipment to playback state.
- 2. (Height adjustment) Check that the tape is curled in the tape guide of the heads. If curled, rotate screws ②, ③ and ⑤ in the same angle and move the entire heads parallel. Check the mirror cassette where there is curling and, when curling exists in the lower side (actually in the deep side), tighten all screws slightly. If curled in the upper (your) side, loosen them.

- 3. (Adjustment of tilting) Adjust back tension to 0 still in playback state (loosen the tape by rotating the reel in the S side using a small tip such as a pencil), and check that there is no curling or snaking (up or down) in the guide of the record/playback heads. Snaking of the tape may occur only within the range of a difference in the widths of the tape and the tape guide (it curls when tate slacks more than the range). Therefore, carefully check it because it may often be overlooked.
 - If the tape is snaking, rotate screws ① and ② in the same angle and change the tilting of the heads. Tighten or loosen the screws to remedy up or down snaking, respectively.
- Repeat the adjustment 2 and 3 again and converge the height and tilting to suitable positions.
- (Tentative adjustments of azimuth) Demagnetize and clean the heads and playback WS-48B (3kHz, 0dB).
 - Rotate the screw ③ so that the pointer of the level meter of the set or connected to LINE OUT becomes maximun. If the screw is rotated more than 1/2 turn, repeat the adjustments again from 1.
- 6. (Checking of tape pass) Connect an oscilloscope to LINE OUT, replay P-4-A100 (10kHz, -10dB) to describe Lissajou's figures. At about 20 seconds after beginning playback (the tention in the loop becomes stable), check that the variation of the Lissajou's figures occur within ±90° (more preferably within ±45°). If beyond ±90°, adjustments of tilting or height will not be complete, so finely adjust the equipment again from 1.

Standard adjustment tape P-4-A100

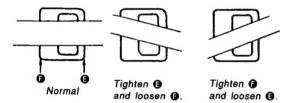

Erase heads

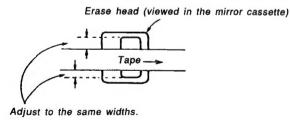

Note: The heads should be adjusted only when the erase head is replaced.

- 1. Mount the mirror cassette and set the equipment to playback state.
- (Azimuth adjustments) Adjust screws 3 or 3 so that the tape runs as parallel to the erase heads as possible.

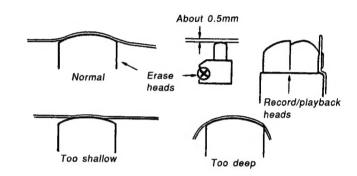

(Erase head viewed in the mirror cassette)

3. (Height adjustment) Rotate screws ①, ③ and ③ in the same angle so that the widths of erase heads seen in the upper and lower sides of the tape become essentially the same. If the width in the upper or lower side is larger, tighten or loosen the screws, respectively.

4. (Adjustments of tilting) Adjust back tension to 0 still in playback state and check that there is no snaking in the erase heads and pinch roller guide in the S side. If there is, change tilting by rotating the screw ①. When the tape moves up or down in the mirror tape, tighten or loosen the screw, respectively.

- Repeat the adjustments again from 2, and converge the height and tilting to more suitable values. And, check that there are no tape curls in the pinch roller guide and the guide of the record/playback heads.
- (Adjustments of thrust) Slightly loosen the screw and finely
 adjust it so that the tape smoothly runs over the entire surfaces of
 the heads by adjusting the thrust of the erase heads to an optimum
 value relative to the tape.

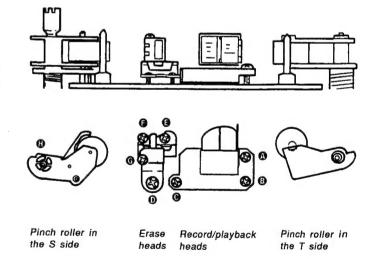

Checking

- Check that the tape smoothly runs over the entire tape pass without curling or snaking.
- After the adjustments, apply the locking compound to the screws adjusted (apply the compound to the screw only after the final azimuth adjustments are completed).

Adjustment Location:

The following views relate to those in the mirror cassette (upper) and MD viewed from your side (lower).

SECTION 4 ELECTRICAL ADJUSTMENTS

0dB = 0.775V

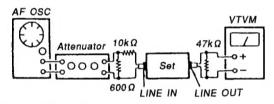

- Perform adjustment in the order listed below. (As a rule, adjust the record system after adjustment of playback system has been completed.)
- 2. Adjust and measure both channels unless otherwise specified.
- To perform simultaneous record and playback, select recording mode, and set MONITOR switch to TAPE, then play back immediately the recorded signal to take out from LINE OUT.

· Switch position

TIMEROFF
MONITOR ······TAPE
CALIBRATIONOFF
DIRECTOFF
BIASCENTER CLICK
REC LEVELCENTER CLICK
BALANCE CENTER CLICK

· Standard Record

Adjust the REC LEVEL (RV502) and BALANCE (RV501) controls so that the I/O signal levels specified below can be attained. Record Mode

Standard Input Level

Input pin	LINE IN
Signal source impedance	10k Ω
Input signal level	0.25V (-10dB)

Standard Output Level

Output pin	LINE OUT
Load impedance	47kΩ
Output signal level	0.32V (-7.7dB)

Test tape

Туре	Signal	Used for
WS-48B	3kHz, 0dB	Tape speed/WOW check
P-4-A100	10kHz, -10dB	Azimuth adjustment
P-4-L300	315Hz, 0dB	PB level adjustment

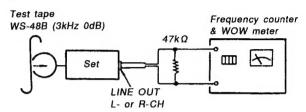

Torque Adjustment

- Load the torque measuring tape CQ-102C, and play back. Adjust RV801 so that the torque meter reading is 40±5g·cm. (0.556 ± 0.069 oz·inch)
- After adjustment, measure back tension and FF/REW torque, and make sure that measured data satisfies the specification.

Torque	Torque meter	Meter reading
FWD	CA-102C	35-45g·cm (0.49-0.62 oz·inch)
FWD back tension	CA-102C	7-11g·cm (0.10-0.15 oz·inch)
FF/REW	CQ-201B	65-90g·cm (0.91-1.25 oz·inch)

Tape Speed/WOW Check

Procedure:

- Play back the top of test tape to measure its output frequency and WOW value.
- Invert test tape and perform same measurement, then check for difference between top and end of tape.

Specification:

Tape speed deviation: within 2,990~3,010Hz
Tape speed fluctuation: within 2,990~3,010Hz
WOW (WRMS): 0.047% or less

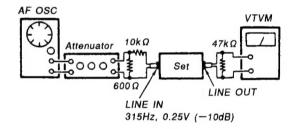

MPX Filter Check

Condition:

DOLBY NR switch : OFF MPX FILTER switch : OFF

Procedure:

1. Mode: stop

- Applying 315Hz, 0.25V (-10dB) signal, adjust the REC LEVEL and BALANCE controls so that the LINE OUT level is 0.32V (-7.7dB).
- Applying 19kHz, 0.25V (-10dB) signal, measure the LINE OUT level.

Specification:

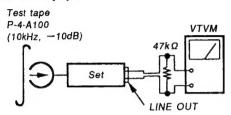

DOLBY NR switch: Either B, C or S

MPX FILTER switch: ON, LINE OUT level must be, 315Hz: within $0.28 \sim 0.36V$ (within $-8.7 \sim -6.7 dB$)

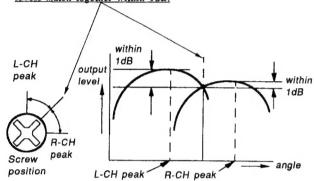

19kHz: 9.8mV (-38dB) or less

Record/Playback Head Azimuth Adjustment Procedure:

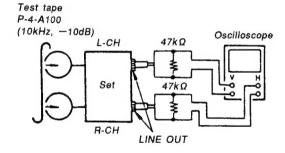

1. Mode: FWD playback

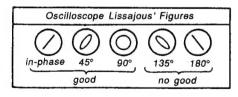

Turn the adjustment screw for the maximum output levels. If these
levels do not match, turn the adjustment screw until both of output
levels match together within 1dB.

 Phase Check Mode: playback

4. Confirm that the phase difference between L-CH and R-CH is in-phase to 90°.

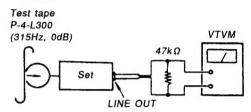

Adjustment Location:

Playback Level Adjustment

Procedure:

1. Mode: playback

2. Adjust the RV101 (L-CH) and RV201 (R-CH) to satisfy the following specification.

Adjustment Value:

LINE OUT level: 302 — 338mV

(-8.2 - -7.2 dB)

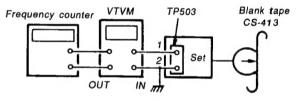

Level difference between channels: within 0.5dB

Confirm that the LINE OUT level does not change when playback and stop are repeated.

Erase Current Adjustment

Procedure:

1. Mode: record

- Adjust RV506 so that VTVM reading is 110mV (erase current 110mA).
- 3. At this time, confirm oscillation frequency.

Adjustment Value:

Erase current: 110 +0 mA

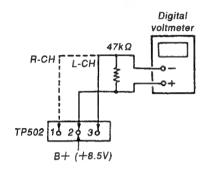

Oscillation frequency: $160 \pm 6 kHz$

Blas Consumption Current Adjustment

Note: The bias consumption current must be adjusted before adjusting the record bias. Retry record bias adjustment after the bias consumption current is adjusted.

Procedure:

- Set semi-fixed resistors RV104 (L-CH), RV204 (R-CH) and RV505 for record bias adjustment to mechanical center, and select the recording mode without applying a signal.
- Adjust T101 (L-CH) and T201 (R-CH) so that the digital voltmeter reading becomes minimum.

Specification: 120mV or less

(This value is measured using CS-413 after bias adjustment.)

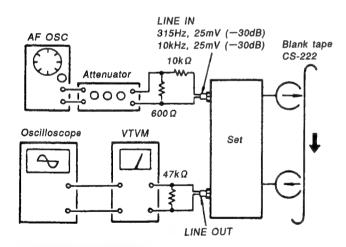

Blas and Recording level adjustment

Condition:

REC LEVEL control: Specified recording position (Page 9)

Procedure:

1. Mode: simultaneous record and playback

- Adjust the following controls so that the minimum output becomes the specified output level.
 - (1) RV104 (L-CH) and RV204 (R-CH)Bias adjustment
 - (2) RV103 (L-CH) and RV203 (R-CH)Recording level adjustment

Adjustment Value:

(1) Level of 10kHz against 315Hz: 0±0.3dB

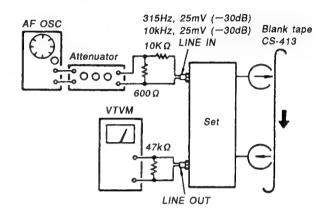

(2) 315Hz level: 30.9 - 33.1mV (-28.0 - -27.4dB)

Metal Bias Adjustnemnt

Condition:

REC LEVEL control: Specified recording position (page 9) Procedure:

1. Mode: simultaneous record and playback

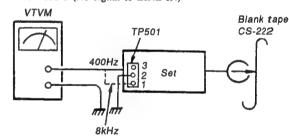

2. Adjust RV505 so that 10kHz R-CH output is $0\pm0.3dB$ relative to the 315Hz output.

Calibration Adjustment and Level Meter Adjustment Condition:

CALIBRATION switch: ON

Procedure (oscillation output level adjustment):

1. Mode: record (No signal to LINE IN)

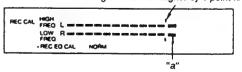

- Adjust RV508 so that the 400Hz check point level is 2.32 2.59V (9.5dB—10.5dB).
- Adjust RV507 so that the 8kHz check point level is 2.32 2.59V (9.5dB—10.5dB).

Procedure (level meter adjustment):

- 1. Record mode (No signal to LINE IN)
- Adjust RV102 to higher side, then lower it gradually.
 Adjust so that the level "a" higher by one point than 0dB of LOW FREQ segment (lower) of CAL level meter turns off.
- Adjust RV202 so that HIGH FREQ segment (upper) up to 0dB position of CAL level meter turns on.

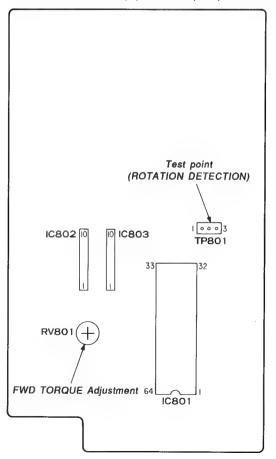

HIGH: Blinking of level "a" higher by 1 point is acceptable.

LOW: Blinking of level "a" higher by 1 point is not acceptable.
